Days of the Moons Age Decreasing from the Full to the Change.

The Moon comes to South in the morn.

The Moon shines in the Morning.

IN the Fifth Column of this *Almanack*, you have the *Age* of the *Moon* standing against every day in the Year, by help whereof and this little *Table*, you may nearly find

I. At what hour and minute the Moon will be just in the South, either evening or morning.

II. How many hours and minutes she will *shine*, either at night or next morning.

III. At what time the Moon *riseth* or *setteth*.

IV. The *hour* of the *night*, by the *shadow* of the *Moon* upon any *Sun-Dial*.

I. To find at what time the Moon will be due South.

*Example*, Upon the 3d. of *March*, the Moon being then 10 days old, I would know at what time the Moon will be upon the *Meridian* or *South*.

Look in the first Column of this Table for 3, the *Moons Age* increasing, and right against it in the second Column, you shall find 8 hours 0 m. at which time the *Moon* will be just *South* in the even.

II. To find how long the Moon shineth.

*Example*, Upon the 29 of *March*, the Moon that day being 6 days old, I would know how many hours and min. she *shineth* that night.

Look

Look for 6 (the *Moons age*) in the firſt Column of this Table, and right againſt it (in the third Column) you ſhall find 4 hours 48 min. and ſo long will the *Moon ſhine* that *Evening*, becauſe the Moon increaſeth.

## III. To find at what time the Moon Riſeth and Setteth.

1. If the Moon be increaſing, that is, if ſhe be leſs than 15 days old, *adde* the hours and minutes of her *ſhining*, to the hours and minutes of the the *Suns Riſing*, and the ſum will be the time of the *Moons Riſing*. But,

2. If the Moon be decreaſing, that is, if ſhe be above 15 days old, *ſubſtract* the hours and minutes of her *ſhining* from the hours and minutes of the *Suns Riſing*, and the remainer will be the time of the *Moons Riſing*.

### For the Moons Setting.

1. If the Moon be leſs than 15 days old, *adde* the time of her *ſhining* to the time of the *Suns ſetting*, the ſum is her *ſetting*. But

2. If the Moon be above 15 days old, *ſubſtract* her *ſhining* from the *Suns ſetting*, the remainer is her *ſetting*, adding or ſubſtracting 12 hours if need be.

## IV. To find the hour of the Night by the *Moons* Shadow on a Sun-Dial.

Find at what time the Moon comes to the South as before, which known, mark how much the Shadow upon the Dial wants of 12; which take from the time of the Moons coming to the South, the remainder is the hour of the Night. But if the Shadow be paſt 12, add thoſe hours to the coming to the South, and the ſum is the hour of the Night.

*Example.* Upon the 5th. of *April*, the Moon being 13 days old, and comes to the South at 20 h. 24 m. and that Night I find the Shadow at 9 h. 30 m. which wants 2 h. and a half of 12, wherefore take the 2 h. and 30 m. from 10 h. 24 m. and there will remain 7 h. 54 m. for the hour of the Night. But if the Shadow had been 2 h. 30 m. after 12, thoſe added to 10 h. 24 m. would make 12 h. 54 m. for the hour of the Night.

| Hours | XII | XI I | X II | IX III | VIII IV | Morning. Afternoon. |

## The Uſe of the SUN-DIAL.

FOr the ready finding of the hour of the Day by this *Dial*, you muſt provide a ſtraight Staff or Ruler, which muſt firſt be divided into Ten equal parts, and then each of thoſe into ten other ſmaller parts, ſo will the whole Staff or Ruler be divided into 100 equal parts, which may be numbred by 10, 20, 30, &c. to 100: And ſo is it fitted for Uſe.

Now when you would find the hour, you muſt erect your Staff or Ruler perpendicular, that is, ſet it upright upon ſome plain level ground, floor or table, and note the place where the end of the ſhadow did fall, and with your Staff meaſure the length of the ſhadow in Staves lengths, and hundred parts of the length, according as 'tis numbred.

*Example* 1. Suppoſe that upon the 16 day of *January* I do erect my Staff perpendicular, and meaſuring the length of the ſhadow thereof, I find it to be exactly 3 times its length; wherefore, finding the 16 day at the top of the moneth of *January*, I find 3, 0 to ſtand againſt the 16 day, and at the top find XII, which tells me it is then juſt 12 a Clock. ——— *Example* 2. Suppoſe that upon the 6 of *May* I erect my Staff as before, and meaſuring the ſhadow thereof, I find it to be twice the length of the Staff, and 44 parts more; wherefore, I look at the top of the Dial in *May*, for the 6 day, and caſting my eye along that line, towards the right hand, I find 2, 44 to ſtand in that Column, at the top of which is VII. V. which tells me it is either 7 of the Clock in the morning, or 5 in the afternoon. ——— *Example* 3. Upon the 16 of *April*, I find the length of the ſhadow to be one the Staffs length and 30 parts more; I look in *April* for the 16 day in the Sun-Dial, and in the line againſt it for 1, 30, and againſt it in the fifth Column I find 1, 33 (which is the neareſt number neareſt to 1, 30, in the Table) over which there ſtands IX and III, which ſhews that it is almoſt 9 in the morning, or a little after 3 in the afternoon. ——— *Example* 4. Upon the 26 of *June* I find the length of the ſhadow of the Staff to be once the whole length, and 29 parts; if I look for this number 1, 29. in the Sun-Dial againſt the 26 of *June*, I can find no ſuch number, but the neareſt to it leſs in that line is 1, 21, over which ſtands IX. III. and the neareſt number to it, greater, is 1, 38, over which ſtands VIII. IV; ſo that you may conclude the hour to be between 8 and 9 in the morning, or between 3 and 4 in the afternoon. A little practice will make all this plain: For *Vſus optimus Magiſter*.

# February hath XXIX Days.

*By knowing the price of the Pound Weight of any Commodity in Farthings; to know the price of the great Hundred (or 112 l. weight.)*

For every Farthing that One Pound doth Cost.
Reckon Two Shillings and One Groat.
And that's the price of the Great Hundred weight.

March.

The Number of Pounds, Yards, Gross, or the like, to be bought or sold.

## *The Use of the Table of Accounts.*

THis Table will serve for many good purposes, but it is here principally intended for the Chapmans use in Buying or Selling of any Commodity by the Yard, Ell, Pound, Hundred, Gallon, *&c.* And its use is very easie; as by

### EXAMPLE I.

*At* 9 d. *the Yard, what will* 70 *yards come to?*

Look for 9 *d.* at the head of the Table, and for 70 in the first Row or Column of the same Table, and against 70, and under 9 *d.* you shall find 2 *l.* 12 *s.* 6 *d.* And so much will 70 Yards at 9 *d.* the Yard come to.

Also, *At* 5 d. *the Gallon,* 500 *Gallons will come to* 10 l. 8s. 4d. *And so of any other Price, or any other Number.*

But if you cannot find your just Price at the head of the Table, nor your just Number on the side, you must then take it out at twice, and adde them together, and the sum shall answer your Question.

### EXAMPLE II.

*At* 7 *s. the Dozen of Gloves, what will* 78 *dozen come to?*

| | l. | s. |
|---|---|---|
| 70 Dozen at 7 *s.* comes to | 24 | 10 |
| 8 Dozen at 7 *s.* comes to | 2 | 16 |
| The Sum | 27 | 06 |

So that 78 Dozen at 7 *s.* the Dozen, come to 27 *l.* 6 *s.*

### EXAMPLE III.

*At* 3 s. 5 d. 3 q. *the Ell, what will* 300 *Ells come to?*

| | l. | s. | d. |
|---|---|---|---|
| 300 Ells at 3 *s.* comes to | 45 | 0 | 0 |
| 300 Ells at 5 *d.* comes to | 6 | 5 | 0 |
| 300 Ells at 3 *q.* comes to | 0 | 18 | 9 |
| The Price of 300 Ells | 52 | 3 | 9 |

### EXAMPLE IV.

*At* 7 d. *halfpeny the Pound, what will* 92 *Pound come to?*

| | l. | s. | d. |
|---|---|---|---|
| 90 Pound at 7 *d.* the Pound, comes to | 2 | 12 | 6 |
| 2 Pound at 7 *d.* the Pound, comes to | 0 | 01 | 2 |
| 90 Pound at a halfpeny, comes to | 0 | 03 | 9 |
| 2 Pound at a halfpeny, comes to | 0 | 00 | 1 |
| The Price of 92 Pound, at 7 *d.* 2 *q.* | 2 | 17 | 6 |
